

Road user sensitization through the analysis of Road accident Data from 2021 in Germany

Presented By

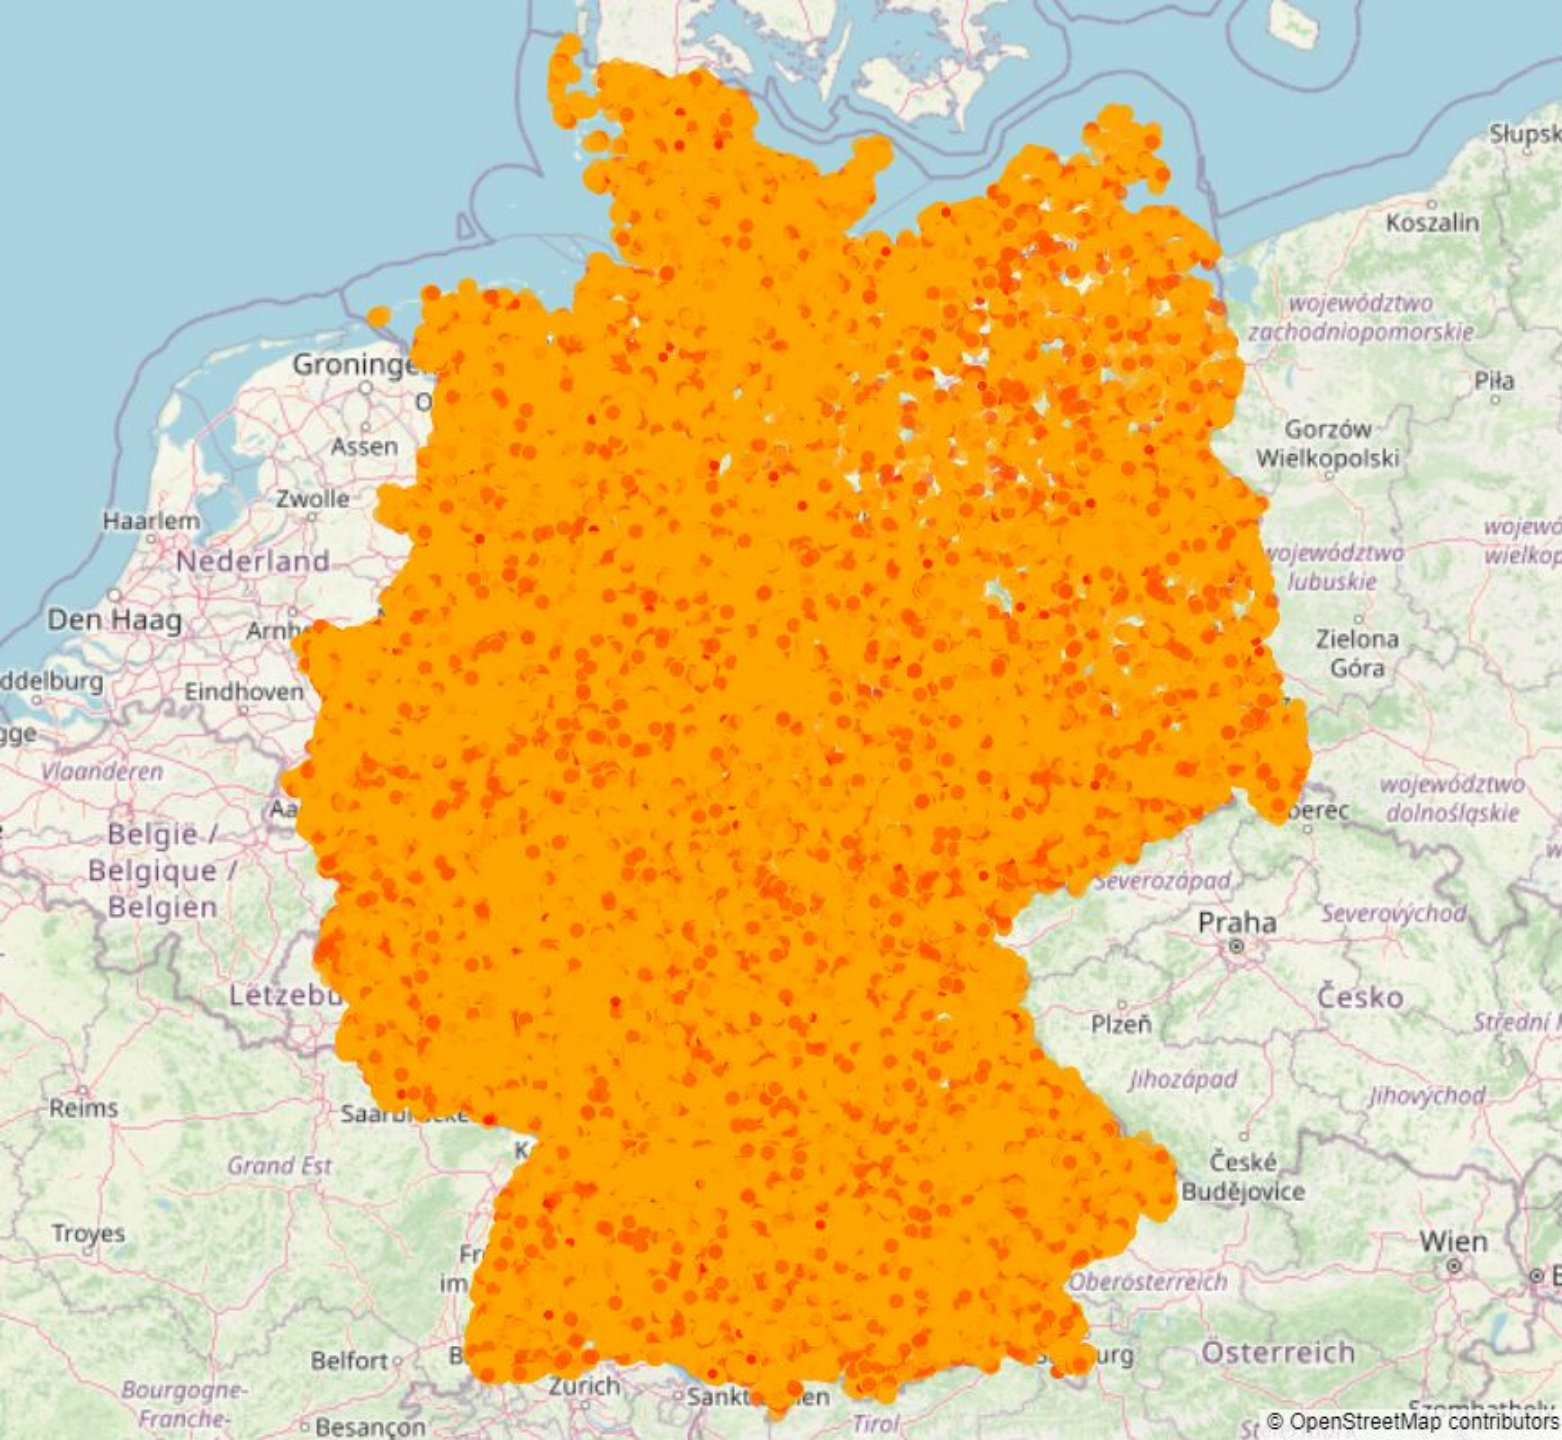

Matthew Iyobosa Oviawe

E-mail - oviawemattthew@gmail.com

Aims & Objectives of the Project

- Visualisation of the Data.
- Comparing accidents per States with the respective population of each States.
- Accidents per square Kilometer for each State.
- Accident categorization based on the nature of the injured victims.
- Accident categorization using Months and Weeks, Days and Hours.
- Accident categorization using Hours and Road conditions.
- Seasonal categorization both for the Germany and North Rhein-Westfalen.
- Various means of road accidents.

4 = Wednesday

5 = Thursday

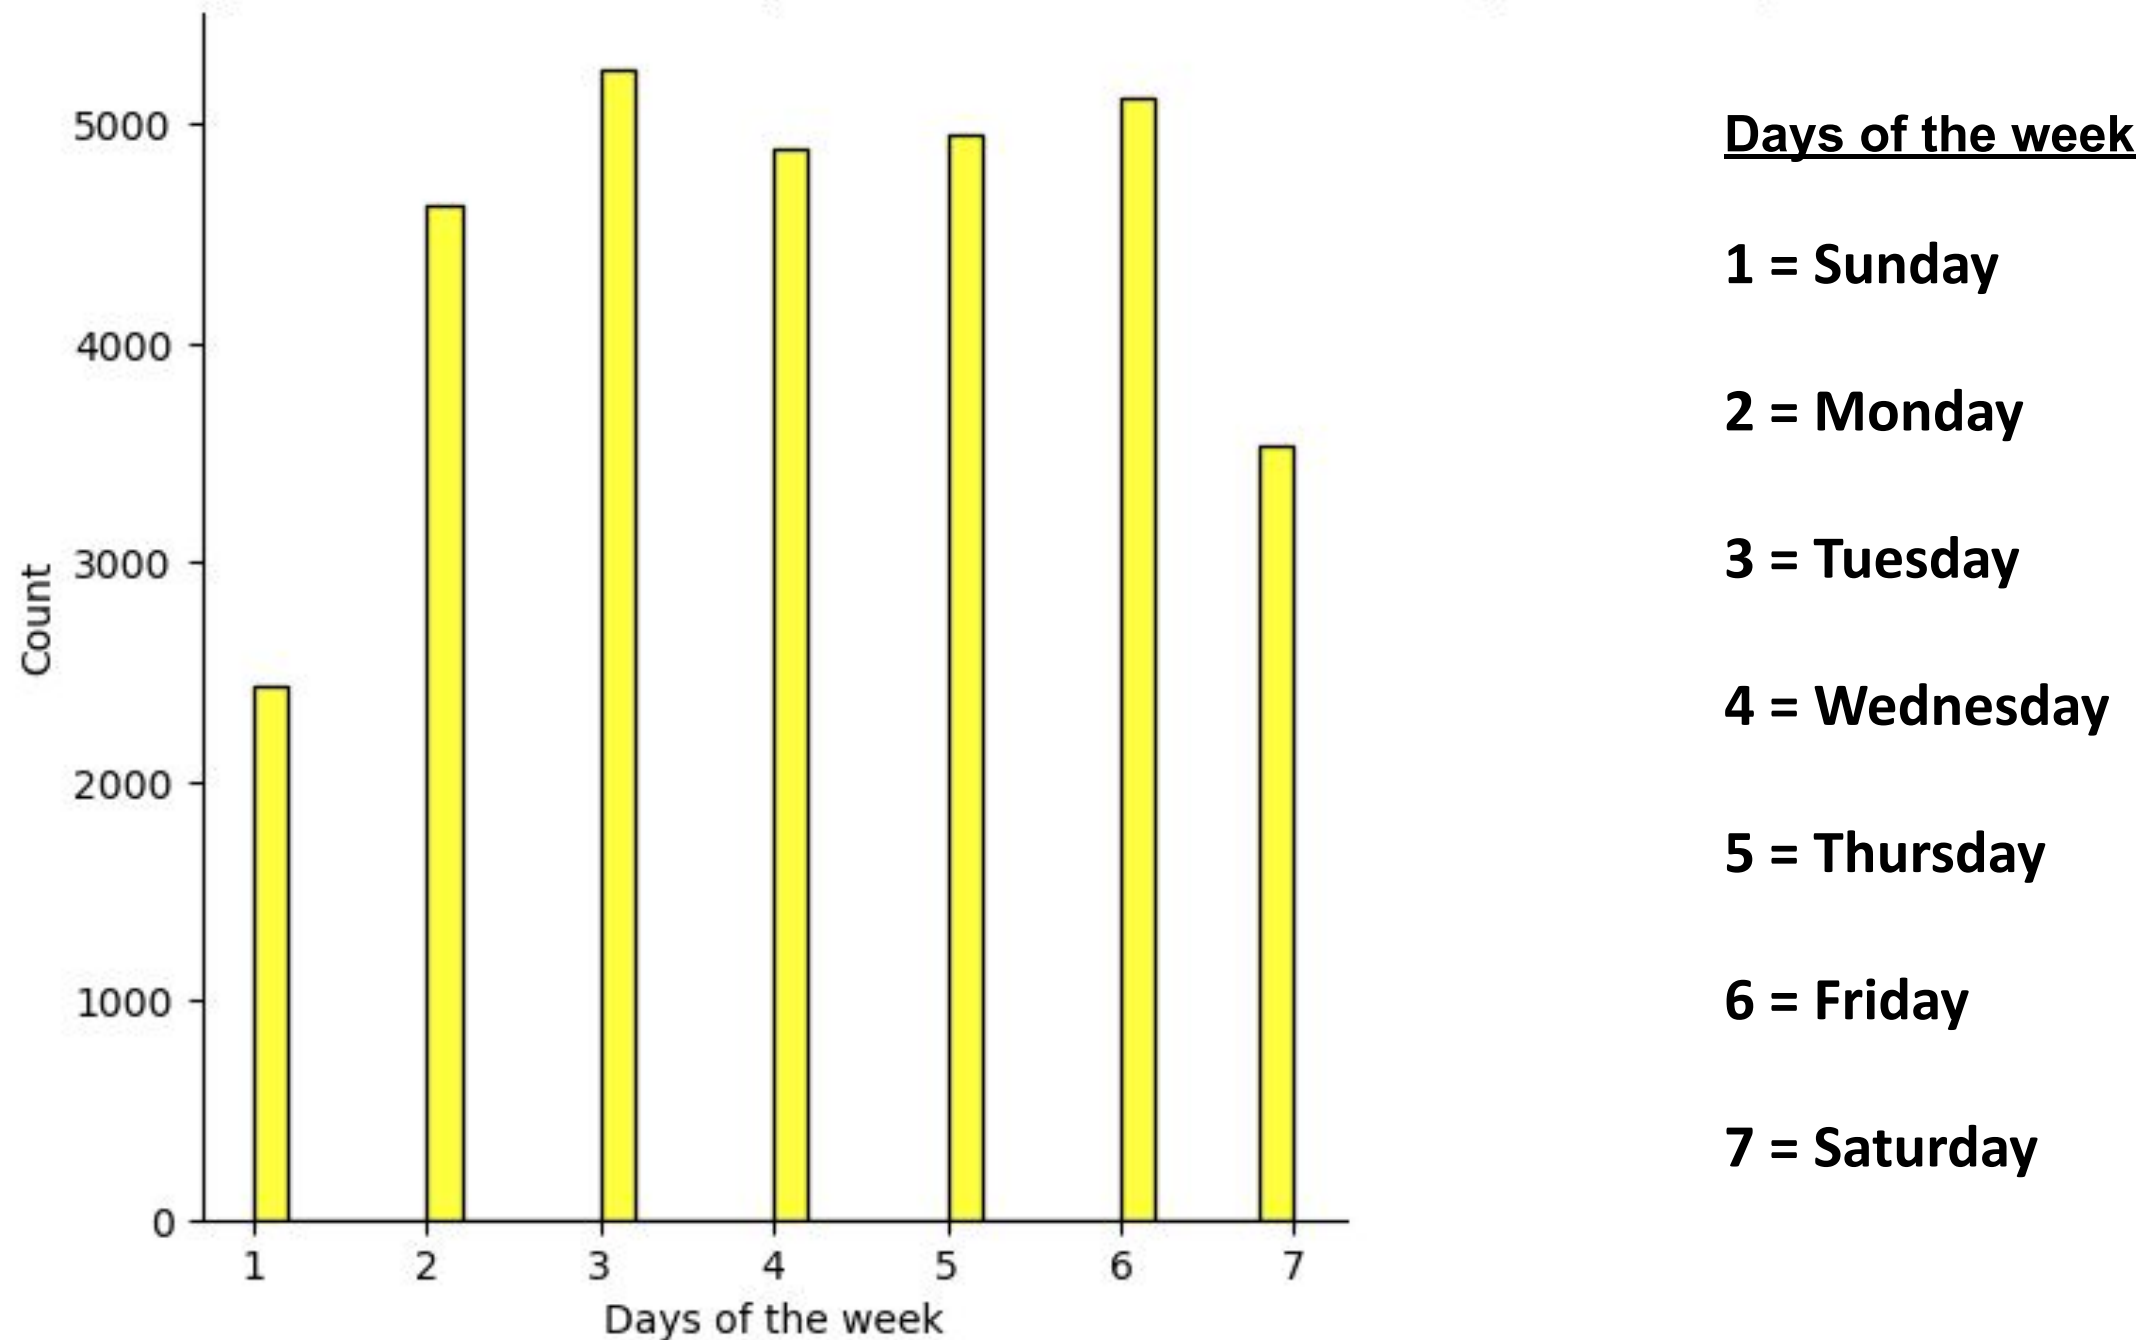

6 = Friday

7 = Saturday

Weekdays accident plot for North Rhein-Westfalen(2021)

Seasonal accidents in North Rhein-Westfalen

CONCLUSIONS

1. The greater the population of the state, the greater the amount of road accident happening with exception of Hamburg.
2. Death related accidents are ~ 1%, accident related to seriously injured are ~ 19%, accident related to minor injuries account for the rest 80% of the total accident recorded for the Year 2021 in Germany.
3. More accidents occur in the last six Months of the Year compare to the first six Months of the Year
4. Road user should be more careful while driving during Autumn and Summer since it's when the higher number of accident were recorded.
5. Road user on Friday, Saturday and Sunday especially at 22 o' Clock should be very very cautious because most accident with seriously injured and Death occur during this period.

Thanks for your attention!!!
